

IN THE NEXT 24 HOURS, PROSTATE CANCER WILL TAKE THE LIVES OF 83 AMERICAN MEN!

Prostate cancer is the most frequently diagnosed cancer in men. It is the second leading cause of cancer death in American men. As many as one in six men will be diagnosed with prostate cancer in their lifetime. Prostate cancer treatment can have a profound effect on the lives of men and their partners.

Northwest Arkansas Urology Associates
is pioneering the

Northwest Arkansas Prostate Cancer Awareness and Support Group
to help men and their families affected with this common disease. We at Northwest Arkansas Urology believe that prostate cancer awareness is of the utmost importance due to the fact that the overwhelming majority of prostate cancers are treatable if detected early. All men should begin screening for prostate cancer at age 50 with an annual digital rectal exam and PSA (prostate specific antigen) blood test. African American men or men with a family history of prostate cancer should begin this screening at age 40 because of increased risk.
